Fully updated to incorporate the latest research and developments, Wireless Communications, Second Edition provides an authoritative overview of the principles and applications of mobile communication ...

Wiley - Wireless Communications

Online Library Guide To Wireless Communications 2nd Edition

2nd Edition 2011 RETAIL ...

P_t In the first strategy $C/B = \log_2 1 + \frac{P_t}{P_t + P_{noise}}$
In the second strategy $C/B = \log_2 1 + \frac{P_t - P_{noise}}{P_t - P_{noise} + P_{noise}}$
Assuming that the transmitter transmits $-x[k]$ added to its message always, power remaining for actual messages is $P_t - P_{noise}$
The first or second strategy may be better depending on P_t
 $\frac{P_t}{P_t + P_{noise}} > \frac{P_t - P_{noise}}{P_t - P_{noise} + P_{noise}}$
 $\Rightarrow P_t - P_{noise} > P_{noise}$
 P_t is generally greater than $P_t + P_{noise}$, and so strategy 2 is usually better.

solution manual of goldsmith wireless communication
