Mechanical Engineering 1953 Kline And method of Kline and Mcclintock (1953). The uncertainty in tervals are ±10 percent for air and ±15 percent for Freon 113, since at high heat fluxes, the temperature differences in the Gr-Cu composite become very small. The sharp drop in Nu at Ra of approximately 104 in Fig. 2 suggests the lower limit of validity of the correlation formulas.

In order to analyze the flow stability of compressors rapidly in the design stage, a fast analysis method is developed in this paper. This method takes the base flow on each streamline at different spanwise locations as the research object and characterizes the effect of blade rows on the internal flow by establishing a body force model.

Analysis Method of Compressor Stability Based on ...
