Project Management A Socio Technical Perspective

The technical and sociocultural dimensions are both very crucial components of the project management processes and project management relies on both of these two dimensions. The technical side of the management process is the formal, disciplined and purely logical part and includes defining the scope, schedule, and resource allocation, status report, planning and controlling the projects.

Technical And Socio-Cultural Dimension Of Project ...

The socio-technical method for designing work systems (Waterson et al., 2002) focuses on system design. It is used to identify tasks that have to be allocated to machines (and hence implemented using IT) and also considers those tasks that have to be performed by humans (both individually, and as teams).

pharmaceutical company (MPC). A mixed qualitative-quantitative method consisting of a case study (33 managers) and a follow-up survey (122 employees) was conducted.

Project Management: A Socio-Technical Perspective

Expanding the perspective of traditional project management research, we draw extensively on central insights from IS research. Building on socio-technical IS research and software engineering research, we suggest four generic patterns of integration: big bang, stakeholder integration, technical integration and socio-technical integration. We analyse and describe the advantages and disadvantages of each pattern. The four patterns are ideal types.

Project Management A Socio Technical Perspective

Socio-technical design is the application of community requirements to people and software and hardware. Pure technical design gives a socio-technical gap (Figure 14), between what technology supports and what people want (Ackerman, 2000), e.g. designing email to let anyone message anyone without permission gave the spam problem. Filters help on a personal level but transmitted spam as a system problem has never stopped growing.
