Being that skill acquisition is still in its infancy, researchers are still trying to figure out what best practices enhance the motor learning process for complex and applied motor skills outside of the lab setting. Traditional approaches to skill acquisition have failed to capture motor learning as a reflection of exploratory activity.

Abstract. We provide empirical evidence of immigrants' specialization in skill acquisition well before entering the US labor market. Nationally representative datasets enable studying the academic trajectories of immigrant children, with a focus on high-school course-taking patterns and college major choice.

Early patterns of skill acquisition and immigrants ...

Acquisition of skill is a type of learning in which repetition results in enduring changes in an individual's capability to perform a specific task. With enough repetition, performance of the task eventually may become automatic, with little need for conscious oversight. Any behavior that needs to be learned and that is improved by practice can [...]
